

Design for Durability & Upgradeability – Jofco, Inc.

Jofco products are designed, engineered, and manufactured to extend beyond the life of our standard limited warranties. This applies to all products used as originally intended, maintained as recommended, and not subjected to excessive abuse.

Jofco is committed to manufacturing products that protect our environment, natural resources, team members, and clients. Beginning with the initial concept review, and throughout the prototyping process, every consideration is given to the selection of materials, design, and manufacturing processes that enhance durability and prolong the life of the product.

Where applicable, Jofco will offer suggestions and methods for upgradeability and refurbishment. Products will be designed and engineered, wherever possible, to be reconfigured as the needs of the end user change.

In addition, recognizing that products and design trends do evolve and change, we encourage end of life recycling. To assist in the proper disposal of products, charts and information are provided on the Jofco website. This includes a pictorial representation of the product in a disassembly state, identifying the recyclable components.
