

## Energy Management Policy – Jofco, Inc.

---

Jofco strives to manage its energy use in a way that lowers environmental impacts and increases energy efficiency. When evaluating options for effectively managing its energy use, Jofco takes into account the following factors:

- The applicability of economically feasible and energy efficient technology,
- Potential reductions in Greenhouse Gas emissions, and
- Effective ways of gathering and evaluating data on energy use to identify opportunities for reduction.

These factors are evaluated at all levels of the corporation during planning, product design, production operations and maintenance, and facility management. Jofco also uses the factors stated above to set objectives and targets for continual improvement in its energy use.

This policy is implemented through procedures and training at all levels of the corporation. The procedures and training are reviewed on a routine basis for applicability, completeness, and effectiveness.
