

Tahké™

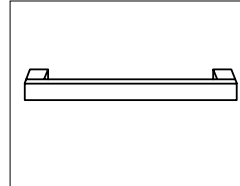

How To Order

1. State Quantity
2. Specify Model Number
3. Bamboo Color
 - Amber
 - Natural
 - Neapolitan - Meeting Tables Only
4. Drawer Style
 - Standard Bamboo
 - Vinyl Wrap
5. Specify Options

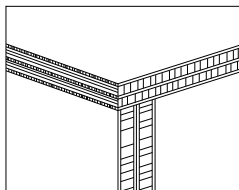

Listed by each product group are options specific to those items. Options with an asterisk (*) are mandatory to make an order complete. Options without an asterisk will be made standard if not otherwise specified.

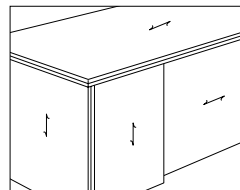

Straight Edge

Tahké™ Hardware

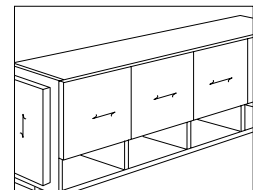

Exposed Grain Detail

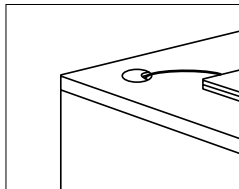

Desk Grain Direction

Modesty panel runs horizontal

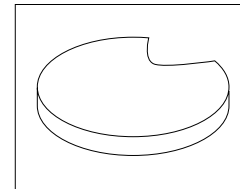

Overhead Grain Direction

Doors and back panel run horizontal

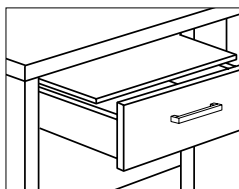

Grommet

Optional for some items-- check individual product selection.

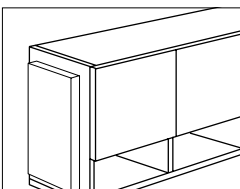

Top Grommet

Natural or Amber, specified to match unit finish.

Concealed Touch Latch Writing Tablet

Standard for some items-- check individual product selection.

Overhead Storage

Must be secured to end panel, storage tower, or wardrobe on both sides for support. Worklights included; tackboard sold separately.

Tahké™ Specifications

Materials

Bamboo Plywood

All exterior surfaces are comprised of 100% bamboo plywood. The bamboo plant is harvested at maturity (five or six years) and replants itself which makes it a rapidly renewable resource. Tahké™ bamboo plywood is produced using strong adhesives which are formaldehyde free.

Work Surfaces - 1" thick - 5 cross ply bamboo, exposed edge grain;
Neapolitan meeting table tops are ¾" thick - 3 cross ply bamboo

Desk End Panels - 1½" thick - 5 cross ply bamboo, exposed edge grain

All other panels - ¾" thick - 3 cross ply bamboo, exposed edge grain

Pedestal backs - Fiberboard with no added formaldehyde

The product edges are flat, exposing the ply of the bamboo and creating a greater conservation during manufacturing.

The bamboo plywood is a natural product without stains. There are two main colors of bamboo: amber and natural. Amber is created through a heat transfer process. The nature of this product may cause tone variations. Tahké™ meeting tables are also available in neapolitan, a mixture of the two colors.

The bamboo plywood hardness and durability is similar to oak. Bamboo is a plant and not a tree. As with most fine furniture, it is not recommended for Tahké™ to be placed in areas of high humidity or areas of extreme dry climates.

Note: Some interior rails used for support may be made from solid hardwood lumber; such as poplar or maple wood. This is done to maximize materials and to eliminate waste during the manufacturing process.

Hardware and Trim

Case Pulls - Fabricated buffed steel with a satin nickel finish

Drawer Slides - Pressed formed steel with natural finish

Standard Drawers - Five sided box style drawer box members ½" edge grain bamboo plywood in natural - tenon and mortise construction.

Optional Drawers - Five sided box, miter fold construction, drawer box members are vinyl wrapped MDF.

Optional Grommet Inserts - Round with wire crescent shape opening for wire pass through, made of ½" edge grain bamboo.

Tackboard - The eco-balanced bulletin board linoleum surface is a tackable surface made from renewable materials. The surface is adhered to an emission free particle board substrate.

Sleeve Connector Bolts - Steel oxide finish

Locking System - Locking system is a bar style system. Pedestal locks are standard. Optional locks are available on doors.

Lighting - Lighting is high efficiency integrated electronic ballast and compact fluorescent puck lights with high output. The lights use seven (7) watts and have the same output as a 20-watt halogen light. Each overhead unit includes four (4) lights.

Case Construction

Pedestal backs utilize tongue and groove construction. Pedestal sides are reinforced with cross stretchers which are bore and dowel assembled. Dowels are pretreated with a fast activating water based glue to ensure the proper adhesion.

Case construction is based on a 32mm grid pattern with three 10mm diameter by 30mm long dowels placed at each end of the joints. Rafix Connector Bolt System is used in special joint areas such as overheads. All cases are calibrated by auto air-driven case clamps.

Finish

All work surface tops are coated in a UV cured water based finish for extreme durability. All other surfaces are finished in a water based sealer and top coat.

On Site Assembly

Most cabinets and cases are fully assembled at the factory. Overhead cabinets are assembled and need to be connected to work surface towers or floor storage cabinets. Special stilts are provided for installation along with instructions.

Note: Installation stilts can be returned for a refund of \$75.

Tahké™ Sustainability Overview

Jhane Barnes

Jofco collaborated with celebrated designer Jhane Barnes to create a completely green casegoods solution. Every detail – glue, veneer and wood species is sustainable. “It is our responsibility to regard the issues of sustainability at all levels,” says Jhane Barnes. “In designing Tahké™, I selected materials that reflect that responsibility.”

The most important material element of Tahké™ is bamboo. To ensure sustainable practices were used in creating the bamboo plywood for Tahké™, Jhane and Jofco partnered with Plyboo™, a company fully committed to environmentally sound practices. The bamboo plywood incorporated in Tahké™ is a no added urea formaldehyde product, and offers hardness and durability qualities similar to oak.

- 1 All exterior surfaces of Tahké™ are comprised of bamboo plywood. Bamboo is rapidly renewable, taking only five to six years to mature. It is self-regenerative, requiring no planting, pesticides, or fertilizers. Only fully mature stalks are harvested not the entire plant, leaving the forest intact through a naturally sustainable cycle.

The bamboo plywood of Tahké™ is produced using strong adhesives which are urea formaldehyde free.

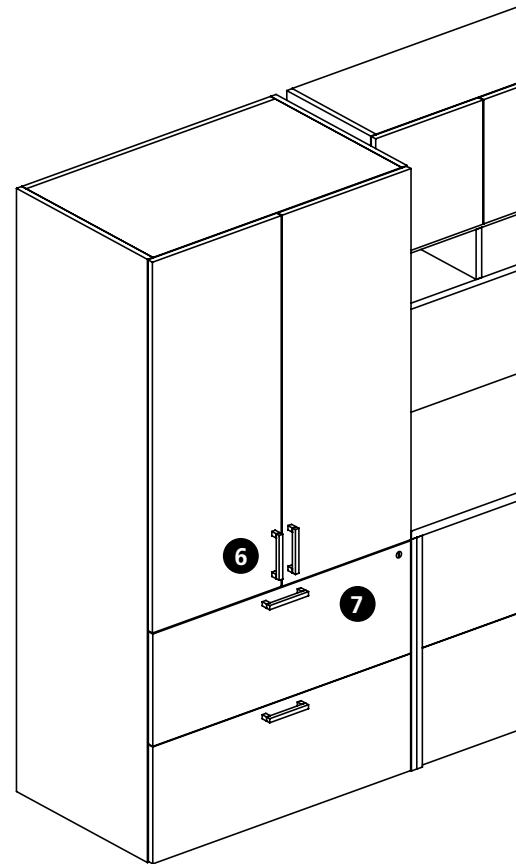

Two colors available for Tahké™ casegoods: natural and amber. The slightly darker amber color is created through a heat-transfer process. As a result of using natural colors, not stains, tone variations occur.

- 2 Work surfaces are 1” thick 5 cross-ply bamboo with exposed edge grain. Using the panels in this state create interest while conserving the energy normally expended in the creation of edge details.

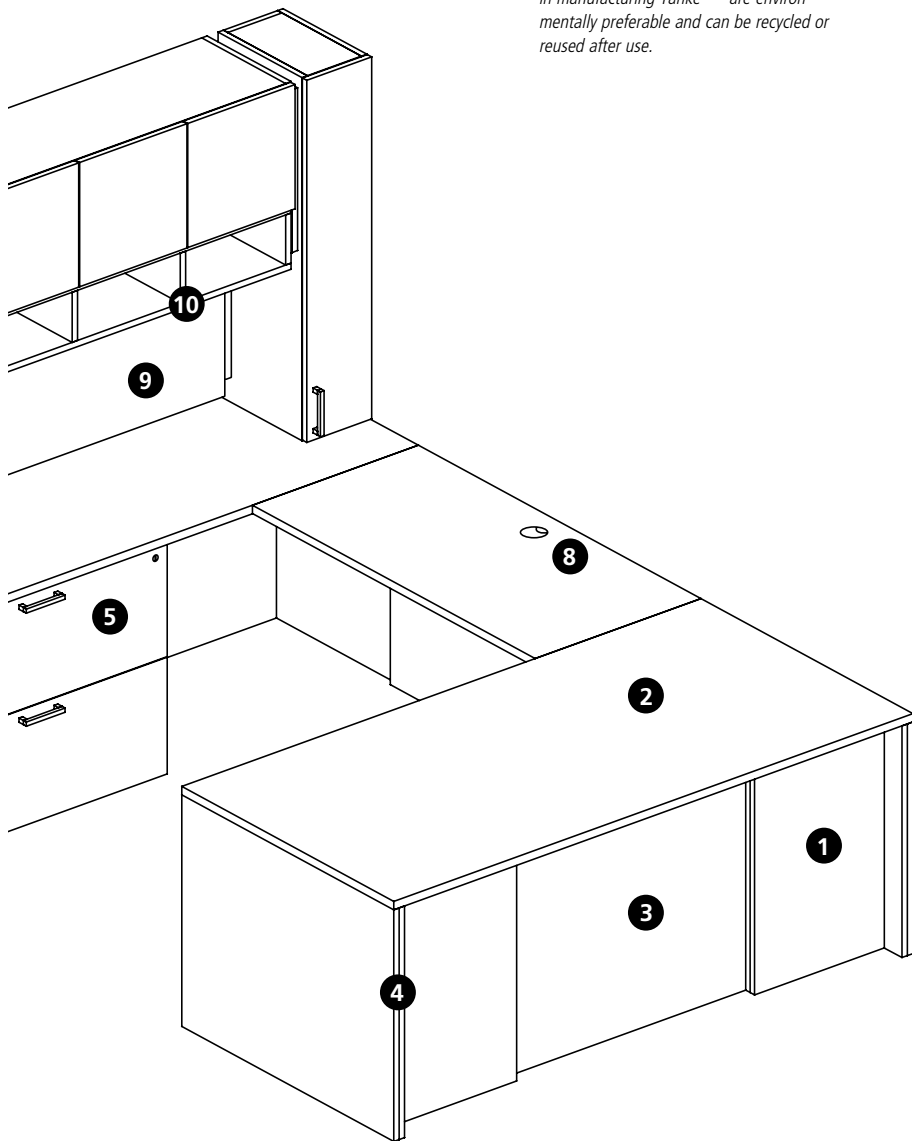

Work surfaces are coated in a UV-cured, water-based finish for extreme durability. All other surfaces are finished using a water-based sealer and top coat.

- 3 Cases are constructed with a dowel assembly and reinforced with bolts in certain joint areas. Dowels are pretreated with a fast activating water-based glue to ensure proper adhesion. Pedestal backs utilize tongue and groove construction.

- 4 Desk end panels are 1½” thick 5-ply bamboo with exposed edge grain. Using the panels in this state creates interest while conserving the energy normally expended in the creation of edge details.

Tahké™ incorporates bamboo with no added urea formaldehyde. Low-emitting adhesives and sealants are used throughout the product manufacturing. Approximately 95% of the materials used in manufacturing Tahké™ are environmentally preferable and can be recycled or reused after use.

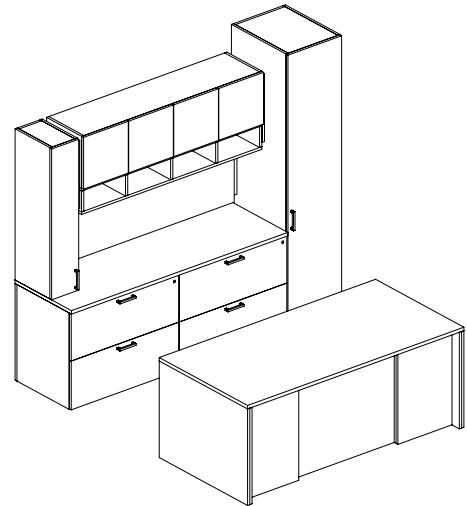

- 5 Pedestal backs are comprised of fiber-board with no added formaldehyde.
- 6 Hardware is fabricated buffed steel with satin nickel finish recyclable after use.
- 7 Standard drawers are made from 1/2" natural edge grain bamboo plywood.
- 8 To eliminate the need for additional materials, the optional round grommets are produced from 1/2" edge grain bamboo and given a crescent shape cut-out for wire pass through.
- 9 The eco-balanced linoleum bulletin board is made from ecologically responsible materials, consumes very little energy in the manufacturing process, and is considered an emission-free particle board substrate.
- 10 Lighting is achieved with a highly efficient electronic ballast and four compact fluorescent puck lights. The same output of halogen lights is achieved using only a third of the wattage.
